

Chapter 3 Bioregions: Balanced Communities

Banff Springs Snail

Burrowing Owl

Leatherback Turtle

- What do these three creatures have in common??????

What is a Bioregion

- A part of the earth's surface identified by its combination of natural and human characteristics
- Regardless of its size, every bioregion combines living species (including humans) and the non living factors that support them

Landforms

Climate

— = Non Living
— = Living

Humans

Fauna

Flora

Soils

Water
